1.	Pro	iect	des	cri	ption

What is your project about? What does your system have to do? What is the problem to be solved?

2. Technical challenges in this project Describe the technical challenges that are beyond those encountered up to the end of third year and in other final year modules.
2.1 Primary design challenges
2.2 Primary implementation challenges
3. Functional analysis
3.1 Functional description Describe the design in terms of system functions as shown on the functional block diagram in section 3.2. This description should be in narrative format.
Describe the design in terms of system functions as shown on the functional block diagram in section 3.2. This description should be influentiated format.

Figure 1. Block diagram showing the proposed functional structure of the system.

	nts and specifications of the system or product (the mission-critical requirement	ents) in table format IN ORDER OF IMPORTANCE. Require	ment 1 is the most fundamental requirement
mese are the core requirements	Requirement 1: the fundamental functional and performance requirement	Requirement 2	Requirement 3
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.			
2. What is the target specification (in measurable terms) to be met in order to achieve this requirement?			
3. Motivation: how or why will meeting the specification given in point 2 above solve the problem? (Motivate the specific target specification selected)			
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?			
5. Your own design contribution: what are the aspects that you will design and implement yourself to meet the requirement in point 2? If none, remove this requirement.			
6. What are the aspects to be taken off the shelf to meet this requirement? If none, indicate "none"			

	Requirement 4	Requirement 5	Requirement 6	
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.				
2. What is the target specification (in measurable terms) to be met in order to achieve this requirement?				
3. <u>Motivation</u> : how or why will meeting the specification given in point 2 above solve the problem? (Motivate the specific target specification selected)				
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?				
5. Your own design contribution: what are the aspects that you will design and implement yourself to meet the requirement in point 2? If none, remove this requirement.				
6. What are the aspects to be taken off the shelf to meet this requirement? If none, indicate "none"				

	Requirement 7	Requirement 8	Requirement 9	
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.				
2. What is the target specification (in measurable terms) to be met in order to achieve this requirement?				
3. Motivation: how or why will meeting the specification given in point 2 above solve the problem? (Motivate the specific target specification selected)				
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?				
5. Your own design contribution: what are the aspects that you will design and implement yourself to meet the requirement in point 2? If none, remove this requirement.				
6. What are the aspects <u>to be</u> taken off the shelf to meet this requirement? If none, indicate "none"				

	Requirement 10	Requirement 11	Requirement 12	
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.				
2. What is the target specification (in measurable terms) to be met in order to achieve this requirement?				
3. Motivation: how or why will meeting the specification given in point 2 above solve the problem? (Motivate the specific target specification selected)				
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?				
5. Your own design contribution: what are the aspects that you will design and implement yourself to meet the requirement in point 2? If none, remove this requirement.				
6. What are the aspects to be taken off the shelf to meet this requirement? If none, indicate "none"				

5. Field conditions These are the REAL WORLD CON	NDITIONS under which your project has to	o work and has to be demonstrated		
These are the NEXE WORLD COT	Field condition 1	Field condition 2	Field condition 3	
Field condition requirement. In which field conditions does the system have to operate? Indicate the one, two or three most important field conditions.				
Field condition specification. What is the specification (in measurable terms) for this field condition?				
6. Student tasks				
6.2 New knowledge Describe what the theoretical fo		w knowledge you will acquire (beyond that covered in any	y other undergraduate modules).
